

ALMA Light and energy savings

Who has not experienced displeasure when seeing the electricity bill? Many of our clients look for light fixtures that contribute to lower expenses in terms of electrical consumption... and that is where LED technology comes into play.

LED is a sustainable element, long-lasting, highly energy-efficient and that saves us up to 50% in consumption if we compare it with previous technologies. In addition, the LED does not heat up and is much safer, instantly reaching maximum light intensity.

At ALMA Light we feel very committed to technological advances and energy savings. Nowadays, all our collections include some type of LED: a large number of collections (for example Totem II, TheLight, Fuji or Tribeca) bear integrated LEDs of the best energy efficiency and quality.
