STONE

Design by Josep Novell - Josep Puig

Stone designed by Josep Novell + Josep Puig 2007

The STONE collection was first presented at the Euroluce show of 2007 with a great success till

nowadays, becoming one of our classic designs.

Consists of luminaries STONE IN (indoor) and STONE OUT (outdoor, IP65), and is produced with a large diffuser in molded polyethylene in the form of a rolling stone. This organic shape allows to integrate this luminaire into the ongoing decoration trends, and allows the lamp to be installed making multiple combinations with different interpretations. In installations with several pieces together, we can create really interesting effects: groups of stones on a ceiling or scattered stones on a garden slope or on a wall. As a pendant, it has a special interest because it is not a symmetrical piece and has 'faces' and different looks, that is, several takes depending on where you look from.

The structure is made of white-painted iron on all models except the 'OUT', that has a structure that combines aluminum and stainless steel, for it to be outdoors. The shade is made of white rotomolded polyethylene and perfectly sifts the light. STONE LED includes an Epistar LED 48W (two concentric rings of 30 and 18W respectively) 4000lm 2700K that carries a powerful light capacity.
