

Outdoor lighting... also in winter

Christmas is approaching and, despite the low temperatures in the northern hemisphere...

Why not give our outdoor spaces a touch of light, now that nights are long? The charm of a well-lit terrace or garden is indisputable, and cold weather is no excuse. It is enough to provide warm textures, with suitable fabrics, cushions and blankets to cover the furniture. We can also place chairs and loungers made of noble materials such as wood, or even add a fireplace, brazier or outdoor wood or gas stove. And why not put candles in glass jars? But especially, we can play with light, so that our outdoor space looks charming beyond the hours of sunshine.

A terrace with night lighting is fantastic to enjoy outside, and it is a pleasure to contemplate our garden with the right touches of light through the windows, from inside our home.

ALMALight proposes various options for terrace or garden luminaires, some of which are fixed, such as our STONE OUT LED for floor, wall or ceiling; or like our TINY collection of lamps to be placed outdoors. TINY has a model to be installed on a wall, another for surface to illuminate a garden table, or a third that is screwed to the wall or floor.

And to illuminate outdoor spaces, ALMALight also has several options of USB rechargeable battery lamps (TRIBECA-USB, PATIO, BELL, NAUTIC and CUADRAT) that, being cordless, can be placed anywhere; we can even take them away, to where we want to bring light and an elegant touch of design.
