Fold

ALMA Light

Design Andrea Gelpí (Blaumel Studio)

At ALMA Light we keep on with novelties... now with the Fold collection! This original table lamp concept designed by Andrea Gelpí (Blaumel Studio) has a very beautiful and functional design with an ecological touch, since Fold is made with two noble recyclable and reusable materials: iron and glass.

Fold is an attractive light fixture very capable of creating atmospheres: the perforated metal sheet of its structure allows light to filter through its tiny holes, generating different light perceptions around it. Depending on how it is placed, it produces one light or another. The intertwined shape of its body allows us to contemplate all its layers and admire its sobriety and transparency. And its versatility is a highlight: Fold is designed to be placed both on the floor as a supporting light next to an armchair or sofa, or providing light to a corner... as well as on surfaces such as a bookshelf, table or nightstand, hallway furniture or auxiliary desk, providing an even more beautiful effect when its two sizes are combined next to each other.

Indeed, Fold is manufactured in two sizes, large and small. The structure is made of perforated iron sheet in two finishes: metallic with bronze or gold metallic varnish, and textured epoxy paint in white, black or corten. The inner

sphere is made of matte opal triplex glass and houses the light source, a G9 socket compatible with an LED bulb. Fold is not dimmable, and includes a simple ON/OFF switch along the cable.
