## Large format luminaires

Large format luminaires are increasingly present in current decorations and are no longer exclusive to hotel halls, large atriums or huge spaces with soaring ceilings. Contemporary and functional suspensions of large dimensions are now part of current interior designs in homes, restaurants, shops, offices or offices. These large pieces convey character and give a spectacular touch, since they tend to become protagonists, the focal point. Not in vain are these types of luminaires called 'jewel lamps', since they add great value to the space and cause such a resounding visual impact, that all eyes are raised on them.

At ALMALight we are strongly committed to this trend with TheLight, ThePalm and TheChandelier pendants. Would you like to know more? Keep reading...

TheLight collection is a reversal of the classic 'chandelier' with a design based on straight lines and two LEDs integrated per arm, one at each end. TheLight presents 'vintage' reminiscences that contrast with a modern air; besides, it is striking eye-catching. Its 30-arm version is the largest, although there are two other smaller versions, 18 and 12 arms, as an alternative.

ThePalm, on the other hand, follows in the footsteps of ALMALight's contemporary chandeliers, but with a softer personality and a design with rounded shapes that remind us of a palm tree. As in the case of TheLight, its 30-arm version is the one that offers the greatest visual effect, although there are also two other smaller versions, 18 and 12-arms, this time with one single Led housed in each arm.

TheChandelier maintains the same spirit of the previous two, although with its own personality. The opal glass shades are ovoid in shape and the iron of their structures transmits strength and solidity. It has an air of the twenties, with all the positive connotations associated with that joyous period. The 15-arm model is its largest version, although it also exists in 9 arms and in 3. TheChandelier bears E27 sockets, which allow choosing the bulbs that best suit the user's wishes in terms of temperature, intensity and possibility of light regulation.
