MiniSpot collection

Design by Cristian Cubina

[View online version](#)

ALMA Light presents MiniSpot, a new proposal by Cristian Cubina. The common denominator of this series is its small adjustable cylindrical head that contains an integrated LED and an optic that provides a concentrated light beam at 30°. Composed of a floor lamp, a sconce and a table lamp, the MiniSpot collection is designed to provide powerful, punctual and direct light wherever it is needed.

MiniSpot is a minimalist, discreet, sober collection, with simple shapes and adaptable to any space. It is equipped with Led technology, therefore MiniSpot offers durability and low consumption, very convenient for the necessary energy savings. The wall lamp with adjustable arm is perfect for a headboard, the table lamp is suitable for a bedside table or a desk, and the floor lamp is ideal to be placed next to an armchair or sofa. The MiniSpot collection solves the lighting of a bedroom, office or reading area, either in a home or in an office, library or cultural space, and especially in the bedrooms of a hotel facility.

MiniSpot is produced in three models: floor lamp, table lamp and wall lamp with a 180° movable arm. The structure is made of iron painted in textured white or black, although upon request it can be customized in any color. The light source is an integrated Cree 3W 3000K 260lm Led with a 30° light beam that is dimmable in intensity in the case of the table and floor lamps (with touch dimmer switch) and 'on-off' in the case of the wall lamp.
