**Totem II wall lamp by  
ALMA Light**  
Design by Cristian Cubiña

[View online version](#)

After the floor lamp and the Totem II pendants launched in the first quarter of 2023, ALMA Light now presents the Totem II wall lamp that arrives to culminate this beautiful series designed by Cristian Cubina.

The most visible feature of the Totem II wall lamp is its fluted transparent borosilicate glass shade that is held in place by a beautiful iron exoskeleton. We love its refined retro air and the balance it maintains between solidity and transparency, as well as its personality, which attracts the eye despite its discreet dimensions. Totem II is ideal to illuminate a corridor, to create a point of light on a bedside table or to be placed in any place where a beautiful and elegant wall lamp with a high degree of design is required... it is also suitable for the bathroom, thanks to its IP44 protection and class II. It can also be installed as desired, horizontally or vertically.

Totem II wall lamp is manufactured in two sizes (approx 25cm and 50cm). The iron structure is available in two finishes: textured black painted and satin bronze electrolytic bath, although upon request the finish can be customized. Inside the fluted glass shade, there is a Led strip with an opal diffuser that avoids glare. The Led strip included in the small wall lamp is 10W 1150lm 2700K >80CRI, and that of the large one is 20W 2300lm 2700K >80CRI. The driver is housed inside the structure and is 220-240V non-dimmable, so these two wall lights are not dimmable.
