Tribeca Chandelier collection

Design by Jordi Llopis

[View online version](#)

A new launch of ALMA Light for this 2023 is here: Tribeca Chandelier, designed by Jordi Llopis, an impressive set of large suspensions whose most relevant characteristic is that they can be combined with each other.

The collection is based on three rings (60, 90 and 120cm diameter) of 6, 9 or 12 shades each. Each ring can be installed individually, or forming a double or triple pendant... or larger! The rings can be the same or of different diameters, and can be placed with the shades facing up or down as required by the decoration. Tribeca Chandelier is, therefore, a truly "à la carte" collection of light fixtures made up of an infinite number of combinations starting from just 3 structures. The thin curved tube of the rings (12mm) offers great visual lightness, the alabaster provides serenity, translucency and the unique and unrepeatable veining of each shade. The majestic design of the Tribeca Chandelier is a magnet for the eyes. Ideal for lighting a dining table in its simple version, or for atriums, stairwells or large spaces that require a large multiple suspension.

The structure is made of textured black painted iron, attached by a braided steel cable that can go directly to the canopy, or hang vertically from the ceiling, in which case the canopy is installed independently. The shades are 12cm diameter alabaster spheres that house an integrated 4.5W 2700K 270lm LED. Tribeca Chandelier can be supplied on-off, or dimmable by TRIAC or by DALI. The driver is always included, housed inside the canopy.
