PATIO

Design by Oriol Llahona

Patio designed by Oriol Llahona

PATIO is a wireless lamp ideal for installations, designed to illuminate a table, either indoors or outdoors, without the need of a plug. Perfect for its use in hotels, restaurants, terraces... It uses a 3W LED light source with a maximum output of 260 lumens. Thanks to its polyethylene rotomolded shade, the light is dissipated evenly illuminating the space without shadows and the aluminium cover prevents the glare to the people sitting around the table

It houses a Li-ion battery that allows 17 hours of autonomy, that is charged with a USB charger (like the ones used for mobile phones) located at the base. Besides it has an on-off switch with three positions to adjust the light according to the needs of each moment. The finishes of the PATIO lamp, as well as its serene and smart design, give it great elegance apart from its functionality, as it can be placed anywhere regardless of having a plug nearby. The diffuser is molded polyethylene in natural color and the body is made of sandblasted and anodized aluminium, available in two versions: silver and gold.
