PotLight

ALMA Light

Design Josep Novell & Josep Puig

ALMA Light presents PotLight, a table lamp that gives a lot of play. Halfway between a light fixture and a recreational object, the Potlight shade is made up of two concentric cylinders of borosilicate glass that leave a 2cm space between them... which can be filled! Things as varied as paper, fabric, wood shavings, food items, jewelry, marbles, photos, documents... or any contribution born from the user's imagination and creativity (as long as it is not a liquid) are compatible with PotLight.

The tables at a wedding can be decorated with photos of the happy couple, a restaurant can place the menu between the two glasses, at an event the space between the two Potlight glasses can be filled with products or images related to the occasion... PotLight offers infinite variations that do not require any effort.

Of course, PotLight is beautiful naked, and can equally be used without placing anything between the two shades.

PotLight is a design by Josep Puig & Josep Novell and is composed of a solid ceramic base and a double borosilicate glass shade, one transparent on the outside and the other sandblasted on the inside. The PotLight collection has only one model. It includes an E27 lamp holder, so light temperature and power are up to what the user decides when choosing the bulb. It has a cable with on-off switch without a dimmer.
