Staircase Hole Luminaires

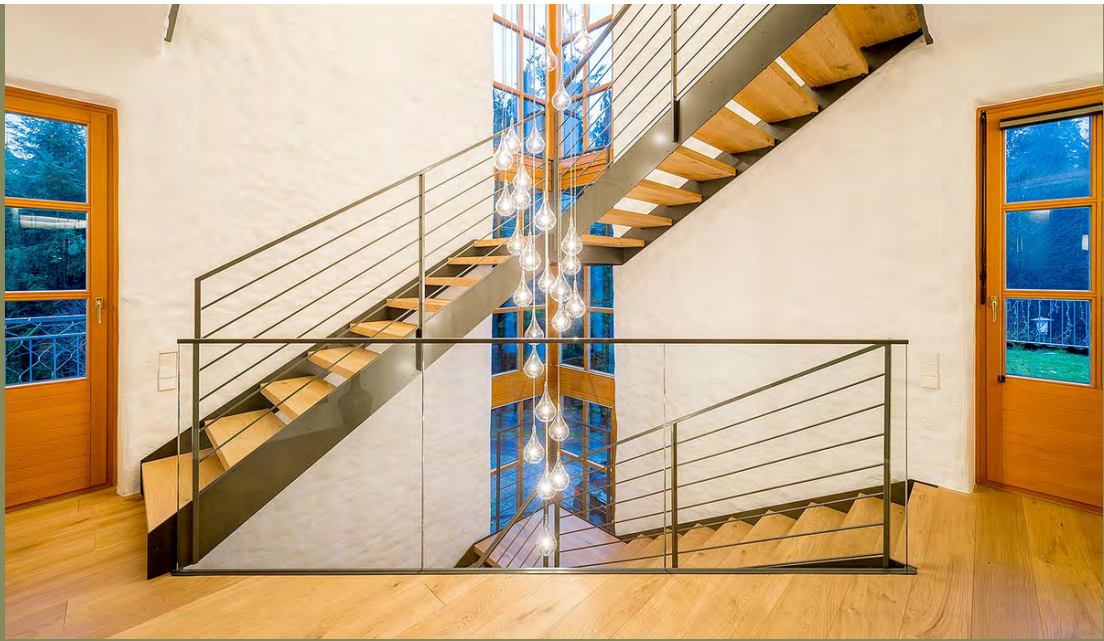

Lighting up a staircase hole may not be as easy as it sounds. It is usually a vertical section that sometimes occupies several floors, an often narrow and somewhat unpleasant space that will require some deal of imagination. Installing a lighting fixture in a stairwell might be a challenge, but at the same time it is an excellent opportunity to turn it into a small work of art and give it a visual impact, without forgetting the purpose of the luminaire, which is precisely to provide excellent lighting on the steps.

With a dual purpose and without falling into high electrical consumption –the staircase light is often 'on' for hours– ALMALight can propose infinite options. We will today give you only a few examples, among the many that ALMALight can implement...

The 'Drop Led' collection offers a warm and bright light that goes through the drop-shaped transparent blown glass, a true classic. The 'Soft' model, with pink or smoked-black Bohemia glass, provides a powerful Led light, this time filtered through the color of its beautiful shade. 'Led Oval', with its mirror-polished cast aluminum shades and methacrylate diffusers, offers shiny metallic glints along the staircase, with Led light directed downwards. The 'Blow' suspension offers, in addition to its Led technology sifted through its white opal glass, a series of shades in various shapes that can be mixed-and-matched with each other, so that each end user can customize it to their liking.

Do you have to light up a staircase hole? Write to info@almalight.com , we will study your case and will propose to you our best option.
