ALMA Light

Design Jose Manuel Mateo & Anna Salvans  
(Ozestudi)

ALMA Light light fixtures are always manufactured under parameters of proximity, responsible consumption, materials of domestic origin and environmental criteria. Now, with the new Nonet collection designed by José Manuel Mateo and Anna Salvans from the Ozestudi studio, ALMA Light goes one step further, using 100% recycled materials for the first time. Thus, ALMA Light is unmistakably committed to sustainability, circular economy and respect for the environment.

Indeed, the material of the Nonet structure is a polyethylene (PE) developed exclusively for this collection and which comes mainly from food industry packaging, marine litter and other plastic waste such as DVD covers, obtained in collaboration with institutions dedicated to recycling and fishing boats, which pass through a process of crushing, extrusion, molding and machining in the supplier's own facilities, until they become perfect plates with a very aesthetic finish, a 100% recycled, clean, useful, everyday and long-lasting product.

Nonet is a fresh, versatile collection, with personality and character. The neutrality of its shape allows it to be integrated into any decoration, and due to its bright

colors it is ideal for avant-garde, modern interior designs and even with a 'vintage' touch. It is manufactured in two versions: simple (H31cm) and with handle (H37cm), and both can be supplied on/off with a normal switch or dimmable with a switch/dimmer. The structure is 18mm thick and is available in two colors: marbled green and marbled black&white. The shade is an 18cm diameter matte opal triplex glass sphere that houses a G9 socket.
