## The FUJI collection the warmth of alabaster

[View online version](#)

At ALMA Light, we are proud of all our collections, but the FUJI series holds a special place in our hearts due to its elegance and sophistication. Designed by Jordi Llopis and inspired by the shapes of Japan's Mount Fuji, FUJI stands out particularly for its use of alabaster in its lampshades.

The FUJI collection by ALMA Light not only illuminates homes, retail projects, or hospitality and catering spaces, but also decorates and transforms environments with the warmth of alabaster. Discover more about the FUJI collection and how it can transform your spaces by visiting our website or contacting ALMA Light.

Alabaster is a highly ornamental material known for its texture, softness and ability to filter light. It is extracted from the quarry in block form; then it is cut, machined, and polished piece by piece. Although alabaster can be found in various parts of the world, the valley of the Ebro river in Spain is the main supplier of this mineral globally, and it is in its quarries that the FUJI lampshades are born, small works of art created by nature with their own personality and unique veins.
