TOTEM II

Design by Cristian Cubina

In the first launch of ALMA Light in 2023, we present Totem II, a proposal by Cristian Cubiñá. Totem II combines two noble materials such as iron and transparent borosilicate glass. What differentiates the new Totem II from its predecessor Totem I is the structure of three stems that firmly hold the glass, as well as the integrated and dimmable Led technology.

Totem II is an elegant floor lamp, a beautiful luminous column that gives light at 360 degrees. It has a refined retro air and a stylish balance between weight and lightness, between solidity and transparency. It brings personality to minimalist interior designs, or blends into more complex environments, becoming a living room base-wild card adaptable to any space. It is ideal for a home environment, to provide a touch of design to a commercial space, for common areas in a hotel or restaurant, for a waiting room... the options are endless.

Totem II is 150cm high, the shade is made of transparent fluted borosilicate glass and the structure is made of iron. This model, easily customizable for projects in terms of finishes, in its standard version will be available painted textured black and satin bronze by electrolytic bath. The light source is an innovative dimmable 2700K 16W 1520lm Led module included in the light fixture, through a dimmer-switch located on the cable.
