TRIBECA USB

Design by Jordi Llopis

Tribeca USB designed by Jordi Llopis

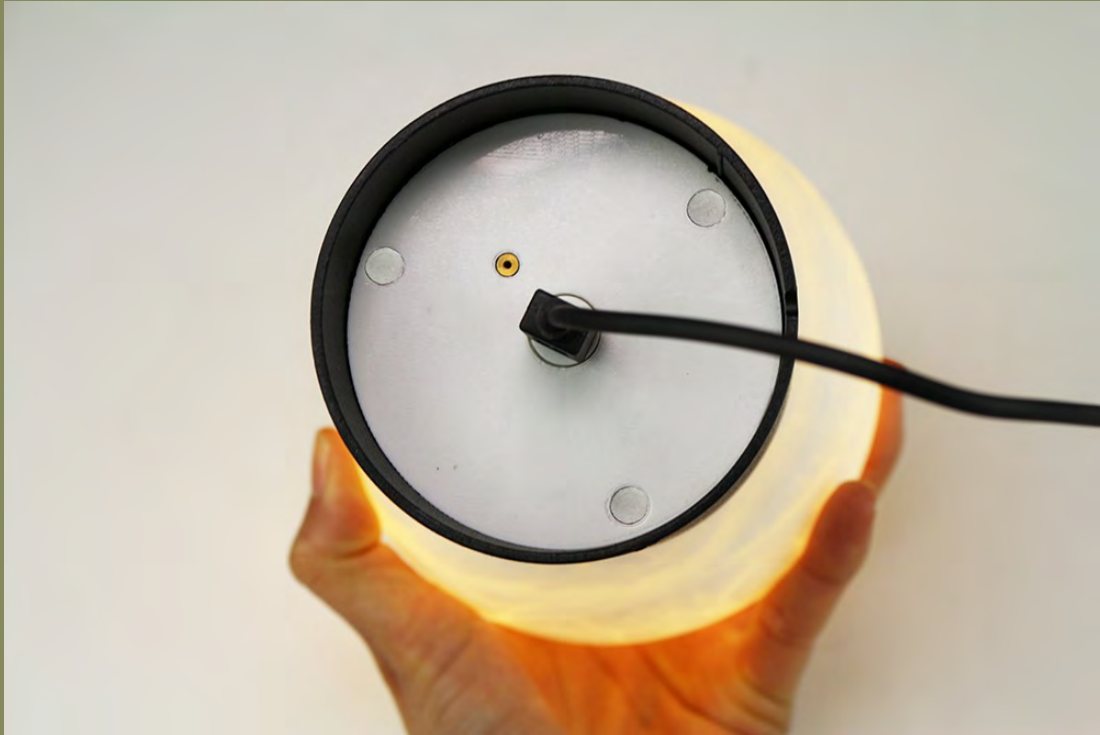

Current times have made us rethink everything related to mobility, and terms such as teleworking, cybernomadism, freedom or adaptability are totally trendy. Everything is changing rapidly, including lighting, and cordless battery lamps have become indispensable.

That is why TRIBECA USB is a necessary collection. Not surprisingly, it has recently been awarded with the ADI Delta design given by the prestigious Adi-Fad entity.

TRIBECA USB has two characteristics that make it really special: the comfort and versatility of a small luminaire that can be taken anywhere -garden, field, balcony, terrace, boat, motorhome... or any space inside the house- and another, a beautiful design with a polished natural alabaster shade, with an Art Deco, elegant and minimalist air capable of dressing up with charm any environment.

ITRIBECA is a handmade collection that has an elegant and minimalist air. The alabaster transmits great warmth and gives it a spectacular look when the light comes on, and looks very beautiful when it is turned off. They are two portable desktop IP 45 20 and 24cm high that can be used individually or creating groups, both indoors and outdoors. The structures are painted galvanized metal textured in black, corten or white finishes and include a fully adjustable LED 1.3W 3000K 150lm and lithium polymer battery that is recharged using a USB cable and gives the luminaire an autonomy of 8h in normal operation
